INFORMATION

Seedlist 1 of 2017

In this seedlist we offer crosses made with Angelica as berry parent and pollen parent. Angelica is bred out of a peach crossed with Star Dust. I will describe her colour as a pastel form of light orange/peach/pink with a prominent green/white throat. Angelica is one of those plants that stands out in a green house.

Her partners:-

1. Leaping Salmon - unfortunately I do not have breeding information on this plant.
2. Star Dust - one of the parents of Angelica. From other breeding information, we know that Star Dust splits for either group I yellow or peach.
3. Group 1 GT peach - this plant has Vico Yellow and Chubb peach back ground.
4. Angel's Delight - bred out of Bill Morris and Bonnys Peach. A wonderful plant with proven breeding potential.
5. Dooley - a superb green throat peach and a good breeder.
6. Light orange with green throat - breeding unknown but a good umbel.
7. Gunston x Hirao - a plant with a good flower count and interesting colour.
8. Orange with soft green throat - one of my best oranges bred out of Remus, a very good bronze.
